(54) Title: DATA CARRIER, APPARATUS FOR PROCESSING SAID DATA AND METHOD FOR DETECTING ANGLE INFORMATION FOR COMMUTATION OF THE MOTOR.

(57) Abstract: An apparatus processes the data contained in this carrier (1) by moving (rotating) it. The motor, which rotates the data carrier needs angular information on the rotary part of the motor for commutation. For measuring accurately this angle, marks are placed on the data carrier. A detector senses these marks so that the measurement of the angle is easily performed. Application: The invention is well suited for small sized optical discs.
